ES/NQ Chart Labels Guide

Top Left - 1st Line

- EMA Slope/MACD Filters:
  - Green: Indicates buy bias - price action favors the bulls.
  - Red: Indicates sell bias - price action favors the bears.
- EMA Out of Position/EMA In Position:
  - White: EMA is out of position - distance from the volatility level is too large for trending buy/sell signals.
  - Green: EMA is in position - distance is optimal for trending buy/sell signals.

Top Left - 2nd Line

- Price Within Operation Distance/Price Not Within Operation Distance:
  - Green: The index is close enough to a level for trades.
  - Red: The index isn't close enough to a level for trades.
- Active Buy Signal/Active Sell Signal:
  - Green: A buy signal was generated at the last hit level. Remains on until either the index breaks below the level or breaks above the next level above.
  - Red: A sell signal was generated at the last hit level. Remains on until either the index breaks above the level or breaks below the next level below.

Top Left

- Stop Points Distance Label:
  - White: Shows the recommended stop points below/above a level where a trade is taken. Always on.

ES/NQ Chart Labels Guide

Bottom Right

- Implied Range Label:

  - Indicates the range in which the index has a 95% probability of being found. The edges are often key reversal prices.

Tip:

These labels help you decode the market's structure and signals, so you know when to engage, when to wait, and where to place stops. Keep this guide open while you trade!
